Training Day 9 Report

Date: 4 July 2025

Overview:

The ninth session focused on object-oriented programming (OOP) concepts in Python. It explained how to define classes and create objects.

Topics Covered:

1. Classes and objects in Python
2. _init_ constructor method
3. Instance variables and methods
4. Introduction to inheritance

Details:

We defined classes like Student and BankAccount, created objects, and practiced using constructors. Exercises included calculating area using object properties and simulating transactions.
